

GraphWorld

A dynamic scene-graph benchmark for long-horizon human-agent world symbiosis

1. Dynamic graph world

Shared graph substrate

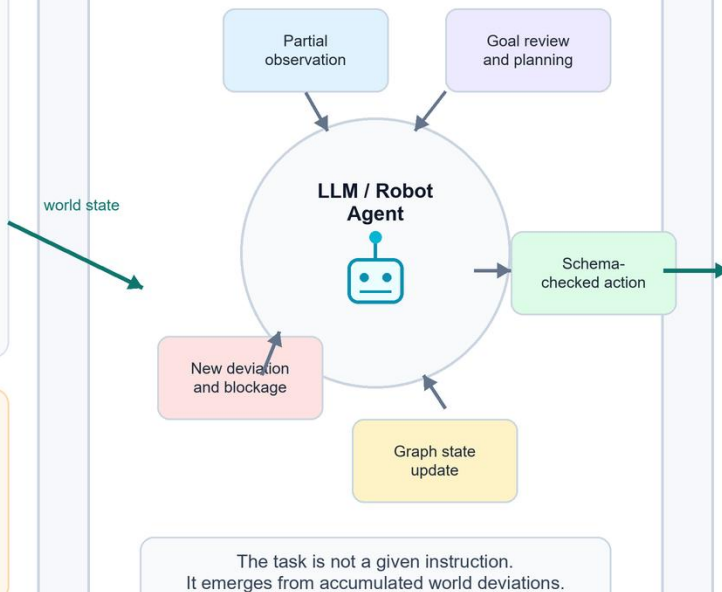

Human events create maintenance demand

patient meds
needs chilled drug

worker shift
needs PPE ready

shopper carts
moves goods

2. Closed-loop agent runtime

3. Long-term evaluation

Three cumulative scores

What GraphWorld exposes

- local fixation on visible mess
- stage drift in multi-step skills
- missed recovery windows
- weak global task scheduling

Benchmark axes

Scenes: home / hospital / office / factory

Profiles: state / space / human events

Schedules: fixed / calendar / stochastic

GraphWorld moves embodied-agent evaluation from completing isolated instructions to maintaining a long-running human-agent-world loop.
