

GraphWorld

from one-shot tasks to long-running human-agent-world maintenance

dynamic scene graph benchmark

● Human schedule ● Dynamic graph ● Action schema ● Blocking recovery

1 Human events create blockages

A later infusion depends on a graph precondition being restored.

2 Robot repairs with legal actions

Local graph view + schema-checked skills.

3 Later human events are scored

Later event success is computed from graph state.

Same graph-native runtime across Home · Hospital · Supermarket · Office · Factory; difficulty varies by profiles and human schedules.
